# AsTrack IT

Configurable, Cloud Asset Tracking Application

> Issues & Returns
> Track by Supplier
> Parent-Child Relationships
> Schedule Inspections
> Save Time & Costs
> Automated Audits using RFID

Tracking of fixed assets has up till now been a headache of spreadsheets and accounting software, moving backwards and forwards between different systems. AsTrack removes this and consolidates all the asset information into the one application.

IT assets are frequently updated or replaced, and with the speed in which technology is changing a need to track these items is becoming ever more important. IT departments are now accountable for the tracking and identification of equipment like never before, with strict maintenance timeframes and compliance regulations. With AsTrack all of your IT assets information can be accessed via a mobile phone, providing instant asset data and attachment such as User Guide PDFs.
