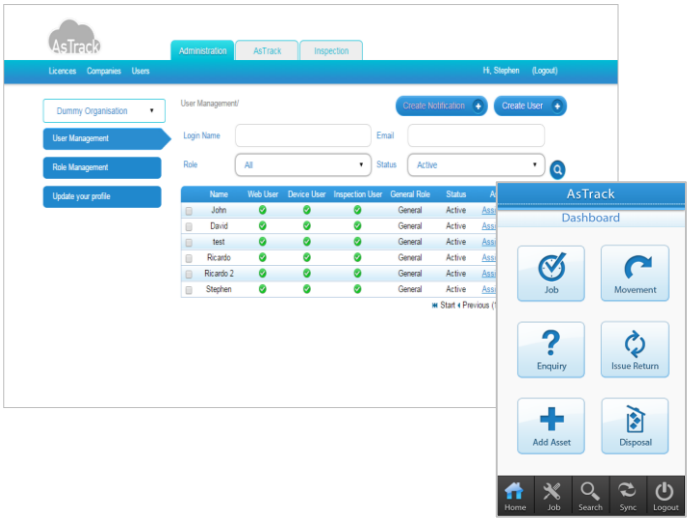
# Configurable, Cloud Asset Tracking Application



> Reduce Theft & Loss

> Cut Labour Costs

> Remote Asset Query

> Efficient Reporting Process

> Tax Report Accuracy

> Reliable Insurance Reports

Tracking of fixed assets has up till now been a headache of spreadsheets and accounting software, moving backwards and forwards between different systems. AsTrack removes this and consolidates all the asset information into the one application.

AsTrack is cloud-based which means no costly infrastructure that will require constant maintenance and upgrades. It is also highly configurable, which means you won't need to change all your internal processes to suit the AsTrack system. The only thing you need to start using AsTrack is a web browser and a mobile phone.
